Jenkins Ansible Setup

This project automates the setup of Jenkins using Ansible, following best practices for playbook structure and reusability.

Folder Structure

- `playbooks/` Main playbooks to execute.
- `roles/` Modular role-based tasks (e.g., Jenkins, Docker).
- `inventories/` Inventory files for different environments.
- `group\_vars/` Group-level variables.
- `host\_vars/` Host-level variables.
- `files/` Supporting files used in roles.
- `templates/` Jinja2 templates (e.g., config files).

Prerequisites

- Python 3+
- Ansible installed (`pip install ansible`)
- SSH access to the remote servers

How to Run

1. ****Check inventory:****

README - How to Run the Playbooks

```
``bash
```

```
cat inventories/dev/hosts.ini
```

```
``
```

2. **Run a full Jenkins setup:**

```
``bash
```

```
ansible-playbook -i inventories/dev/hosts.ini playbooks/setup-jenkins.yml
```

```
``
```

3. **Run a specific tag (e.g., only install Docker):**

```
``bash
```

```
ansible-playbook -i inventories/dev/hosts.ini playbooks/setup-jenkins.yml --tags docker
```

```
``
```

4. **Check connectivity (ping all hosts):**

```
``bash
```

```
ansible -i inventories/dev/hosts.ini all -m ping
```

```
``
```

Clean Up

You can rerun the playbooks or use tags to target specific cleanup tasks if defined in the roles.

README - How to Run the Playbooks

This setup is structured to be production-ready, modular, and easily extendable.
